

Enjoy more **visual freedom** than ever before.

Bausch & Lomb
Vision Shaping
Treatment VST™

Sleep. Your VST® experience begins when your eye doctor uses special equipment to “take a picture” of your eyes. Then your eye doctor prescribes Bausch & Lomb VST® lenses custom-made for you.

They're like special contact lenses – except you only wear them while you sleep. Bausch & Lomb VST is FDA approved.

Shape. Bausch & Lomb VST® lenses are designed to apply slight pressure to your cornea, gently changing its shape overnight. So gently, you barely feel it.

And because VST® lenses are made of a special material that allows a high level of oxygen to flow through them, your eyes stay healthy and comfortable.¹

See. When you wake in the morning, you simply take your Bausch & Lomb VST® lenses out. Then enjoy crisp, clear vision throughout the day.

In fact, your doctor's goal is to provide you with a full day or longer of 20/20 vision.² Plus, the entire process is non-surgical and completely reversible.³

Bausch & Lomb Vision Shaping Treatment VST™
is designed to correct your vision while you
sleep by gently changing the **shape**
of your cornea, so you **see** clearly during
the day – without contact lenses, glasses,
or surgery.

Is Bausch & Lomb VST® right for you?

- Do you wish you could see clearly without glasses, contact lenses, or surgery?
- Do you participate in sports?
- Do you suffer from allergies or dry eyes?
- Does your profession require hassle-free visual freedom?
- Do you have an active lifestyle?
- Are you looking for an alternative to LASIK surgery?

If you answered “yes” to any of these questions, please ask one of our staff members for more information about this exciting non-surgical treatment option.
